

EXIM Marketplace

A Digital Platform for Export–Import (Cross-Border B2B) Trade

Business Overview • What it is, why it matters, and how it works

Plain-language guide with pictures & flow diagrams
Prepared for business / management stakeholders

1. What is “EXIM”?

EXIM stands for **EX**port-**IM**port — the business of selling goods from one country (export) and buying goods from another country (import).

When a coffee producer in Brazil sells beans to a roaster in Germany, or a textile mill in India ships fabric to a buyer in the UK — that is EXIM trade. It is a multi-trillion-dollar global activity, but it is also **slow, paper-heavy, and full of trust problems**, especially for small and mid-sized businesses.

EXIM Marketplace is a digital platform that makes this whole journey simple, fast, and trustworthy — like an “Amazon + LinkedIn + DocuSign” built specifically for international trade between businesses (B2B).

In one sentence: EXIM Marketplace connects verified global buyers and sellers, helps them negotiate a deal online, and then handles the orders and trade documents — all in one place, instead of across scattered emails, phone calls, brokers, and paperwork.

The problem it solves

✗ TODAY (without a platform)

- Buyers & sellers hard to find & verify
- Endless emails, calls, middlemen / brokers
- No clear record of who offered what
- Manual invoices & trade documents
- Fear of fraud / not getting paid
- Deals take weeks; mistakes are costly

Slow • Risky • Disconnected

✓ WITH EXIM Marketplace

- Verified companies in one directory
- Post products & requests; auto-matching
- Negotiate with a clear quote history
- Orders & documents generated digitally
- Identity & KYC checks build trust
- Deals close in days, fully tracked

Fast • Trusted • Connected

Figure 1 — The shift EXIM Marketplace delivers: from scattered & risky to one trusted platform.

2. Who uses it (the players)

The platform serves three main groups. Each sees a different part of the same system.

Figure 2 — Buyers and sellers meet through the platform; the platform admin keeps it trusted.

Player	Who they are	What they do on the platform
Buyer (Importer)	A company that needs to source goods from abroad	Posts a request (RFQ), reviews seller quotes, negotiates, accepts a quote, receives the order & documents
Seller (Exporter)	A manufacturer/supplier selling internationally	Lists products, responds to requests with priced quotes, negotiates, fulfils the order
Platform Admin	The marketplace operator (our business)	Verifies company documents (KYC), supports users, oversees activity, and earns revenue from the platform

3. How a deal works — the business journey

This is the heart of the platform: how two companies go from “strangers” to a “completed, documented deal.” Each step removes friction and adds trust.

Figure 3 — The end-to-end deal flow. Steps 1–7 are live today; step 8 is the next phase.

4. A real-world example (story form)

Meet two companies and follow their deal on the platform.

The Seller — “Cerrado Coffee Ltda.” (Brazil), a green-coffee exporter.

The Buyer — “Hamburg Roastery GmbH” (Germany), needs 500 kg of Arabica.

#	What happens	Business meaning
1	Both companies register and upload trade licenses; admin verifies them.	Each side knows the other is real and vetted — trust from day one.
2	Cerrado lists “Arabica Green Coffee”. Hamburg posts a request for 500 kg.	Supply and demand are visible & searchable .
3	The platform matches Hamburg’s request to Cerrado’s coffee.	No more hunting for suppliers — the match comes to you .
4	Cerrado sends a quote: 500 kg @ \$12.50/kg, FOB . Hamburg counters at \$11.00; they chat; Cerrado re-quotes \$11.75.	Negotiation is fast and fully recorded — every offer is tracked.
5	Hamburg accepts the \$11.75 quote.	A binding agreement, captured digitally.
6	An order for \$5,875 is created automatically from that quote.	No re-typing, no duplicate orders, no manual error .
7	A proforma invoice is generated for the order.	Paperwork that used to take hours is instant .
8	(Next phase) Shipment booked & tracked; payment released via escrow on delivery.	Money & goods move safely .

The outcome: A deal that traditionally takes **weeks of emails, brokers and paperwork** is completed in **days**, with every step verified, recorded, and document-ready — for two companies that had never met before.

5. What the platform can do (in business terms)

Behind the scenes the platform is built as a set of focused capabilities. Here is what each one means for the business — no technical detail needed.

Capability	What it does for the business	Status
 Identity	Company & user accounts, secure login, roles & permissions	✅ Live
 Verification (KYC)	Upload & track trade-license / compliance documents — the trust layer	✅ Live
 Catalog	Sellers list products with standard customs (HS) codes	✅ Live
 Sourcing	Buyers post requests (RFQs); platform matches them to products	✅ Live
 Quotation	Price offers with accept / reject / counter negotiation	✅ Live
 Messaging	Direct buyer–seller chat, with in-chat offers	✅ Live
 Orders	Accepted quotes become tracked orders, automatically	✅ Live
 Documents	Generate trade documents (invoices, packing lists, etc.)	✅ Live
 Logistics	Book & track shipments	⌚ Next
 Payments / Escrow	Secure payment, released on milestones	⌚ Next
 Billing & Subscriptions	How the platform earns revenue (paid plans)	⌚ Later
 Ratings & Disputes	Reputation & conflict resolution	⌚ Later

Why this design is good for the business

 **Modular** — each capability can grow or be fixed without breaking the others.

 **Scalable** — busy areas (e.g. messaging) can be scaled up on their own.

 **Trusted** — verification + secure login + recorded history at every step.

 **Fast to extend** — new features (logistics, payments) slot in cleanly.

6. Business value & roadmap

How the platform creates & captures value

- **For buyers:** find vetted suppliers fast, negotiate transparently, cut sourcing time & risk.
- **For sellers:** reach new international buyers, win deals, reduce paperwork.
- **For the platform (revenue):** subscription plans, transaction/success fees, premium visibility, and value-added services (logistics & payments) in future phases.

Delivery roadmap

Figure 4 — Roadmap: three stages delivered (green), two ahead (amber/grey).

Where we are today: the full “core deal” works end-to-end — a verified buyer and seller can discover each other, negotiate, agree, and produce an order with trade documents. The next phases add **shipping** and **secure payments**, then the **revenue & operations** layer (subscriptions, ratings, admin tools).

Summary — the elevator pitch

EXIM Marketplace turns the slow, risky, paperwork-heavy world of international trade into a **fast, trusted, all-in-one digital marketplace** — helping businesses across borders find each other, make a deal, and get the documents done, with the platform earning revenue by powering every step.
